Coming Input and Output

By Roberto A. Costa Jr, UNIFEI  Brazil**Timelimit: 1**

Your teacher would like to make a program with the following characteristics:

1. Read a sentence that will have a comma in the middle of the text;
2. Print the first part of the sentence;
3. Print the second part of the sentence.

Input

The input consists of several test files. In each test file there is one line. The line has a phrase with a maximum of 100 characters (may have white space) and a comma. As shown in the following input example.

Output

For each file in the entry, you have an output file. The output file has two lines according to steps 2 and 3. As shown in the following output example.

Input Samples	Output Samples
O URI, eh o melhor	O URI eh o melhor
Bem vindo, ja vai!!	Bem vindo ja vai!!
